SUMMARY OF QUALIFICATIONS

- Recent Game Programming graduate from George Brown College with a strong foundation in software development, programming, and problem-solving
- Experience developing applications and interactive systems using C++, C#, Unreal Engine, and Unity
- Knowledge of OOP, data structures, debugging, testing, and collaborative development workflows
- Proficient with Git and Perforce, with strong communication, teamwork, and customer service skills

TECHNICAL SKILLS

- Programming Languages: C, C++, C#, Python
- Game Development: Unreal Engine 5, Unity
- Software Development: OOP, Data Structures, Debugging, Version Control
- Tools & Technologies: Git, Perforce, Visual Studio, Microsoft Office
- IT Fundamentals: Computer Hardware Maintenance, Network Fundamentals
- Web Development: HTML, CSS, JavaScript
- Familiar With: React, Next.js, SQL, Blender, Photoshop, CapCut, Linux
- Languages: Fluent in English and French

EDUCATION

Advanced Diploma – Game Programming

George Brown College, Toronto, ON | 2024 – 2026

- Focused on software development, gameplay programming, game engines, and interactive systems
- Relevant Coursework: C++, C#, Data Structures, Artificial Intelligence, 3D Mathematics, Gameplay Programming, Level Design, Team Project Development

Computer Engineering (Software and Networking)

Université Nongo Conakry (UNC), Conakry, Guinea | 2021 – 2023

- Coursework in software development, networking, Linux environments, and computer systems
- Studied programming fundamentals, network infrastructure, operating systems, and hardware maintenance

PROJECTS

City Rooftops | Unreal Engine 5 | Team Project

- Designed and implemented original puzzle mechanics and interactive gameplay systems
- Created level content and cinematic sequences to support gameplay flow
- Developed UI features and gameplay interactions using Blueprints and Unreal Engine tools

DC3: Viral Menace | Unity | Team Project

- Developed a modular Grid System for gameplay interactions
- Implemented progression and upgrade mechanics
- Built a turret AI using a finite state machine (FSM)

Showroom AI | Full Stack Web Application | Team Project

- Designed the core user workflow, AI integration pipeline, and overall product architecture
- Implemented the prompt validation pipeline using OpenAI API integration
- Developed the generation workflow connecting user input, AI processing, and image creation

Additional projects and detailed technical breakdowns are available in my portfolio.

WORK EXPERIENCE

Sales Associate

Canadian Tire | Apr 2024 – Nov 2024

- Assisted customers with product selection and inquiries
- Maintained inventory and organized store merchandise
- Collaborated with team members to achieve daily operational goals
